

Which explanation fits the source?

Read both in the same voice. Find the clue, then name a limit.

EXPLANATION 1

The card roof is always best because it looks thick.

EXPLANATION 2

In Ari's one reported test, the tissue tore under the broad disk and the card stayed whole with the same disk and gap. The card suited that tested roof purpose in that trial. Another load or gap has not been checked.

Which exact part of the report supports a claim?
