

Capacity needs an actual transfer

Safe supervised water demonstration; picture size proves nothing.

Adult handles clean water over a stable tray.

1 • Verify actual cups before the lesson

Fill smaller cup to full usable brim; then pour.

All water must fit with visible room remaining.

If spill or uncertainty: replace and retest.

2 • Child directs the real transfer

Point, speak, sign or use AAC for each step.

Adult reports the observed space neutrally.

Compare CAPACITY, not cup height in a picture.

Observed: water fit / did not fit / unclear

The cup that can hold more is: _____

I know because: _____

This page alone is not a direct comparison.
