

# Choice, trial and claim boundary

Design, health and movement evidence depend on what happened.

## A · NEED AND EQUAL CHOICES

Who may choose? What is the shared purpose?

An accessible role must still be meaningful.

## B · TESTABLE CRITERIA

What would a paper or approved safe trial show?

What stays unknown until people actually try it?

## C · WHAT ACTUALLY HAPPENED

### PLAN / DIRECTED TEST / OBSERVED RUN

Record the route; do not turn a plan into performance.

## D · LIMIT AND NEXT MOVE

Local policy, user input and real conditions still matter.

No purchase, disclosure or unsafe demonstration required.
