

Hazard to impact

Follow the evidence; stop at the missing step.

1 PROCESS

Card B1: heavy rain and runoff raise the creek.

The process may produce a hazard; no event is observed.

2 MODEL ZONE

Card A: A = H; B = M; C and D = L.

These are relative labels for one invented scenario.

3 COUNTED EXPOSURE

B2 contains 15 model dwellings in M.

Counted dwellings are not a count of people.

4 CONDITIONS

Warning reach, roads and buildings are unknown.

Vulnerability and capacity need separate evidence.

5 IMPACT

No actual inundation or loss is recorded.

A hazard-zone label is not a disaster report.
