# Home 32 · Labels in little groups

**Try one little turn.**

Prepare: Describe nine equally counted paper labels in three groups of three.

Invitation: Ask which fraction one group is, then two groups. Invite a different own grouping or strip instead of copying.

Adult model/check: MODEL 1/3 is 3 of 9;2/3 is 6 of 9;1/3 more completes it. Do not change the whole halfway through.

Observe and respond: Ask for one useful reason; keep the child's response as actually made. If nine is used as denominator for groups, name three equal groups explicitly on another set. No real distribution to people needed.

Usual communication, wanted exact scribing, private/untimed work, rest and stopping are welcome. No purchase, photo or upload. A model is not an observation of your home; actual child mathematical choice, helper physical action and any real willing-reader trial are separately named.
